Coastal Bend Header Project Overview

Gulf South is proposing to expand its existing pipeline system in Southeast Texas. The project consists of:

- **Pipeline**
  - Gulf South is proposing to expand its existing pipeline system in Southeast Texas by constructing approximately 64 miles of 36-inch diameter pipeline across Wharton and Brazoria counties
  - The project will connect with existing pipelines in southeast Texas to supply up to 1.54 billion cubic feet per day of natural gas to Freeport LNG’s existing Stratton Ridge meter station

- **Compressor Stations**
  - One new compressor station in Wharton County
  - Two new compressor stations in Fort Bend and Harris Counties
  - Modifications and upgrades at two existing compressor stations in Polk and Sabine Counties

- **Meter Stations**
  - Six new meter stations in Wharton County
  - One new meter station in Brazoria County

  Once Gulf South receives the necessary approvals, construction could begin as early as spring 2017 with a target in-service April 2018

  Gulf South will work closely with landowners, federal, state, and local authorities when siting and constructing the pipeline and facilities
